

NYAH'S CHIMP ALLIANCE

FUNDRAISER FOR THE

Jane Goodall Institute

**"Only if we understand, can we care. Only if we care, we will help.
Only if we help, we shall be saved." — Jane Goodall**

Chimpanzees are amazing beings who are more similar to us mentally and biologically than any other animal.

- Their capacities have caused us to question the illusion of our separateness from the rest of the animal kingdom.
- They experience the same emotions as we do.
- They have advanced social systems and relationships with members of their communities.
- They even have varying cultures depending on the tribe.

For example, different tools may be made or different customs may be practiced, such as various ways to submit to a Superior.

Chimpanzees have endured much suffering at the hands of humans, such as illegal pet trade or laboratory research, to name a couple. There are still many people who dedicate their lives to saving our evolutionary cousins and seek to protect them at all costs. I am referring particularly to Jane Goodall, a revolutionary primatologist who helped abolish these anti chimp stereotypes. Almost all of our basic knowledge of chimpanzees comes from her.

All earnings from my fundraiser are donated to the Jane Goodall Institute (JGI).
